## **GHG Corporation unveils the cure for the common payroll**

*Secure, easy-to-use Web-based employee management tool results in cost savings, productivity increase*

GHG Corporation today launched electronic Time Sheet Management Solution, eTSMS, an ideal workforce management solution for businesses that require quick, accurate tracking and management of employees' time by project, department, customer or any other category as needed.

The Web-based eTSMS boosts data access and collection, which in turn increases productivity at every level. Thanks to the unique features of eTSMS, including electronic time sheets, online pay stubs, ad-hoc reporting capabilities and leave balance management, employees spend less time recording their tasks; managers and administrators spend less time tracking and compiling information for reporting purposes.

The end result is the reduction of administrative and accounting costs.

"Because eTSMS is a secure, Web-based solution, it is ideal for companies with multiple locations," notes GHG President Israel Galvan. "It's also incredibly easy to use for both managers and employees. Built-in features, including drop-down menus, a time calculator and automated reporting save time, as well as greatly improve reporting accuracy."

In addition to time sheet features, eTSMS offers additional corporate functions, including a company-wide news page, employee roster, online forms and holiday schedules.

For companies that do business with government agencies, eTSMS provides internal controls, security measures, online employee and manager training, and other features that exceed DCAA requirements.

About GHG: GHG Corporation is a Houston-based, minority-owned business with a 23 year history of providing excellence in engineering, quality assurance, software engineering, helpdesk, networking, and Internet services and solutions.
